1 August 2020

**Santander**  
Mönchengladbach,  
Germany

Dear Mr Palti,

I have found this position very enticing as it involves actively participating in the projects, means you can incorporate your own ideas during the development. Dealing with new projects every day will increase my perception of the software engineering field which I love and adore.

Currently, I am completing my Master's degree in Media Informatics at RWTH Aachen University. I already have quite a knowledge about software landscapes as I worked in Samsung for two years, which also involved international exposure. And from last year I also worked in RWTH University's Institute IKA (Institut für Kraftfahrzeuge) which gave me a little bit of introduction about German professional life.

My focus has mainly been towards Data Science and Process Mining which I think in today's world are must-have skills. However, I have also been doing some projects inside the university which require Software Project Management and team skills. I also managed one project called FuzzyMiner for which you'll find the link in the resume.

Working in a big company like Samsung has its own benefits like, production-level software creation, team-work, ownership, and other nuances which are required to make any project successful. Furthermore, I come from a different cultural background which could be of benefit when it comes to collaboration with international colleagues.

I hope to work with Santander in future to further hone my skills. Looking forward to hearing from you.

Sincerely,

**Praveen Yadav**
